Print & Apply-Systems

- Individual solutions for each operation mode
- High resolution colour monitor with touchscreen
- Interactive control of the machine
- User friendly input of master data incl. label design program
- Product pre-selection memory (no article changeover times)

ES 9800 – Multi Roller Printer

For labelling of packages without loss of time for article and/or label change.

Terminal with touchscreen

ES 9600 – C-Labeller

ESPERA's C-Labeller contributes to the value as well as to the uniqueness of your products. The big label offers a wide range for design and information and creates herewith advantages in competition.

The new Stand-Alone-Solution works perfectly in use with ESPERA weigh price labellers or can be integrated in existing production lines.

for the integration
in existing
transport conveyors

ES 9300
for the integration
in existing
transport conveyors

ES 9900
Compact machine with
low space requirement

ES 9010
Labelling from the bottom

The ES 9000 is a fully automatic Print & Apply System. Labelling is carried out whilst the packs are on the move to ensure high performance. The system labels non-stop without time-consuming stops, even if there is a product change, with a high-speed of 150 packs per minute. Therewith the highest real-time requirements are accomplished.

The high level of automation simplifies handling noticeably: Set-up of the product guides, printer positioning, label rotation, label application pressure - all these processes are controlled automatically according to the individually defined setting parameters of the packing program. Differences in height of the packs up to 200 mm are compensated automatically. There is no requirement for external compressed air or adaptation to different label sizes as with other labelling systems. Multi-tasking allows that changes can be done whilst the machine is in operation. This applies also to the input of the next item (PID/CID numbers) manually or online, so that there is no time loss at all to change the items.

All machines include as standard the Espera Management System ESMS as well as a label design software.
