

WEIGHBRIDGES AND MOBILE WEIGHING SYSTEMS

WE STRENGTHEN YOUR BUSINESS

Scanvaegt Systems is more than just a market-leading manufacturer and supplier of high-tech concepts and solutions for weighing, labelling, packaging, and relevant IT systems and tracking solutions. Scanvaegt Systems is first and foremost a strong partner for those who want to strengthen their competitiveness and increase revenues. We offer our customers professional experts who know your industry and know which solutions best strengthen your business.

More than 80 years of collaboration with forward-thinking customers

Since its foundation in 1932, Scanvaegt Systems has been a forward-thinking and innovative company that has contributed to making work easier and more effective for our customers. Through our close and inspiring collaboration with a wide range of industries, we have, over the years, played a significant role in technological development.

Strong service and support team

Whether you need a stand-alone product or a complete turnkey system, you get a solution that is designed to work perfectly, year after year. But even the best solutions need service and maintenance. That's why we provide extensive service and support facilities to our customers.

The complete business partner

While the global world provides plenty of growth opportunities for ambitious companies, there are also challenges in the form of requirements and restrictions from both the EU and local authorities, and competition from countries with lower production costs. By working with Scanvaegt Systems, you gain a partner who will strengthen your business with both its technology and knowledge.

Scanvaegt Systems employs approx. 200 employees, and has a head office in Århus, Denmark, subsidiaries in Norway, Sweden, Poland and Germany, and distributors in a number of other countries.

Innovative thinking and the desire to explore new avenues are what have made Scanvaegt Systems a market leader in multiple areas.

INNOVATION IS PART OF OUR DNA

Even though Scanvaegt Systems is long-established, the company is more forward-thinking today than ever before. Our current entrepreneurial culture and need to create is still going strong, and major resources continue to be allocated to developing new products and business areas. As always, our specialists work purposefully on creating new profitable solutions to the benefit of our many customers.

Experienced developers and process experts

Our development department is run by experienced people with a long service history in the company and a deep insight into our customers' businesses. They each possess knowledge and skills that are not only important for our product development, but also for the ongoing communication we have with our customers. On a global scale, they follow the latest technological advancements, and are in constant communication with authorities on potential requirements that may affect our customers in the future.

A wide range of skills

One of Scanvaegt Systems' major strengths is the multiple skills available in the company. A great example of this is the IT department, where our proprietary IT systems for product control, registration, checking, tracking, dispatch, reporting, and many other tasks, facilitate our customers' lives daily and increases their competitiveness. As we always focus on each individual customer, we often develop software solutions targeted to the customer's specific wishes and needs.

SYNERGY BETWEEN OUR BUSINESS AREAS

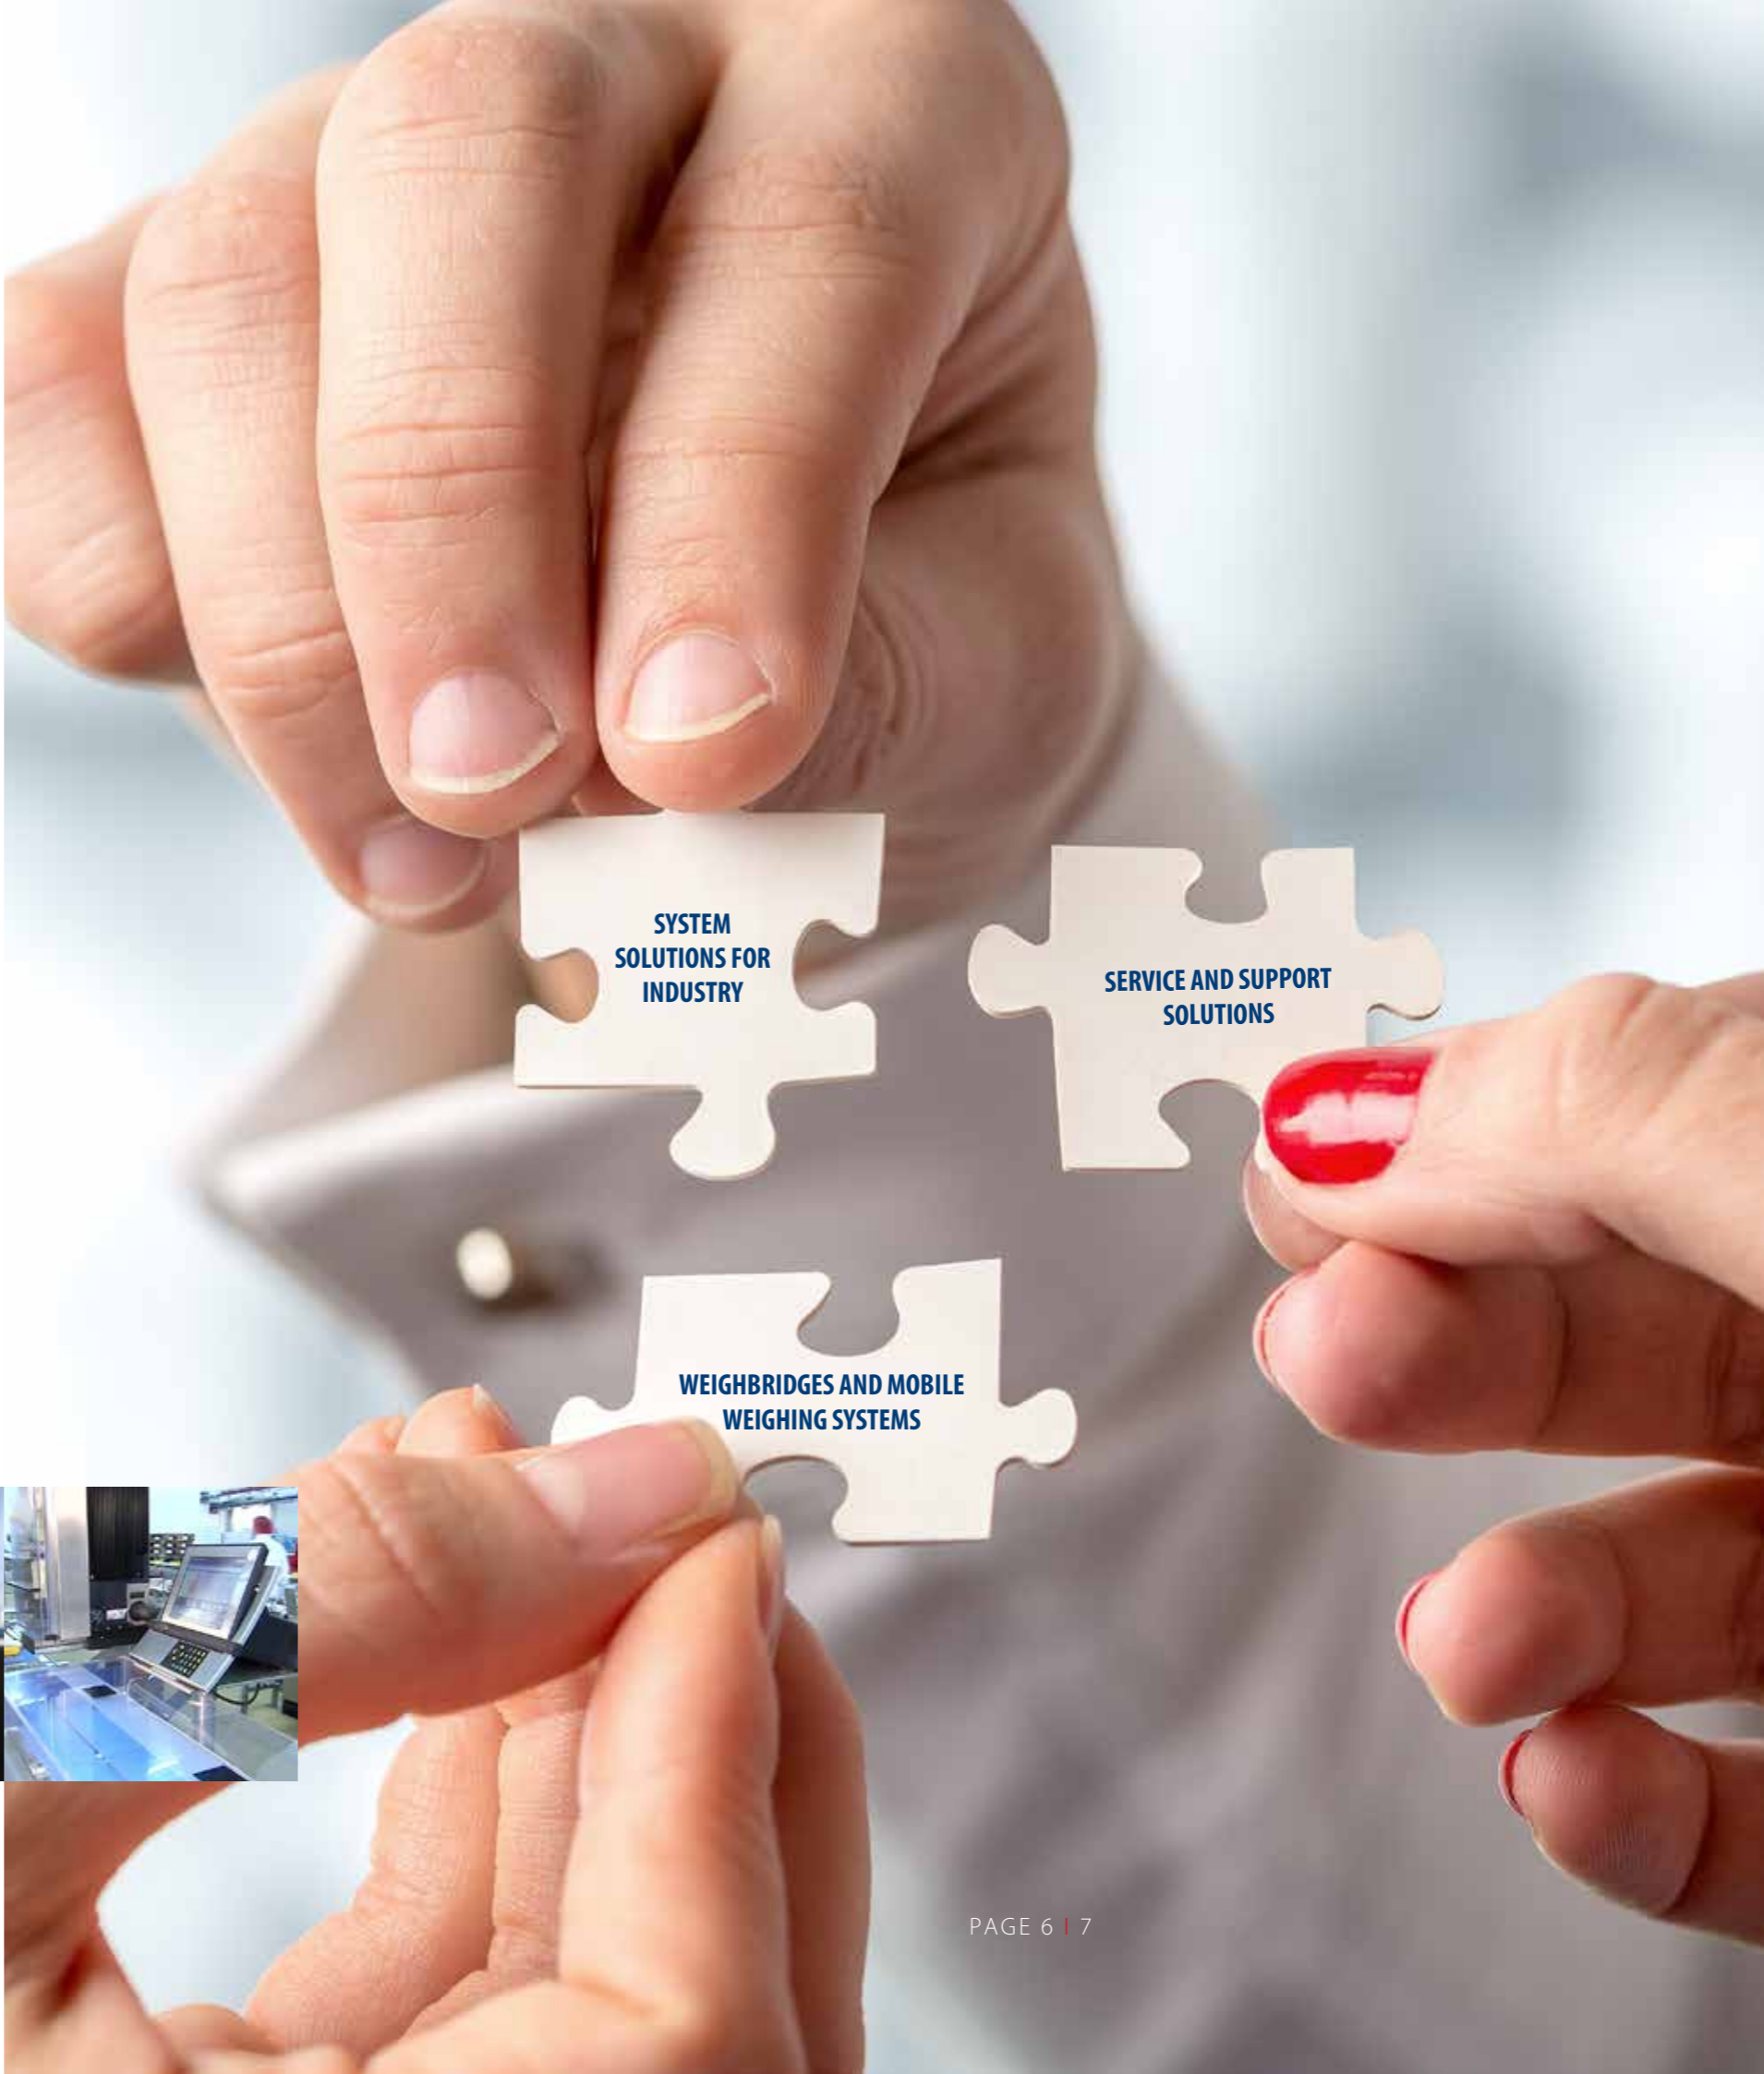

Scanvaegt Systems is a leading manufacturer and supplier for the food industry, transport sector, energy and environment sector, farming, pharmaceutical industry, electronics industry, textile industry and the retail sector. Our collaboration with such a wide array of industries only strengthens our product development and gives us unique skills and experience to the benefit of our customers.

From 0.01 milligrammes to 150 tonnes

Industrial scales with a tolerance down to 0.01 mg, platform scales that can weigh up to 150 tonnes, complete turnkey solutions for the food industry, solutions for receiving scrap, iron and metals, label applicators, check scales - we could go on. Scanvaegt Systems is an important company today, with strong solutions that suit a wide range of needs.

New business areas in the pipeline

Scanvaegt Systems is a solid company with a big vision for the future, and our unique skills are set to benefit even more industries. The synergy between our different business areas regularly generates ideas and input for product development and solutions, which are then adapted to individual industries' and customers' specific needs.

Experience from a wide range of industries gives us a unique competitive advantage next to our competitors.

EFFECTIVE SOLUTIONS AND SYSTEMS

Competitive and regulatory requirements are becoming ever tougher – that's why effective work processes and modern technology are the key to growth and development.

Scanvaegt Systems is one of the industry's most experienced business partners. We supply a range of industry-specific solutions for weighing, registration, data capture and control that ease the daily load and increase profitability for both private and public companies.

Whether you need an individual solution or a larger system, working with Scanvaegt Systems is the way to increased efficiency and new business opportunities.

Scanvaegt designs complete weighbridge solutions for weighing, registration, data capture and control. The solutions, which incorporate hardware and it-systems, solve a number of jobs, specifically related to individual industries and lines of business.

WEIGHING, REGISTRATION AND DOSAGE

Weighbridge solutions

Scanvaegt Systems designs and supplies complete weighbridge solutions for weighing, registration, data capture and control, which contribute to quality, efficiency and increased profitability.

The solutions comprise weighbridges, terminals, traffic control systems, monitoring equipment and IT equipment and are designed to handle industry-specific jobs in the environment sector, recycling industry, construction industry, raw materials industry, recycling plants and farming.

Our weighbridge ranges comprise concrete weighbridge, steel weighbridges, cast-it-yourself weighbridges and portable weighbridges

Mobile weighing systems

Scanvaegt Systems supplies mobile weighing systems for weighing, registration and optimisation of refuse collection, which helps renovation companies increase efficiency and provide the correct basis for waste taxation and invoicing.

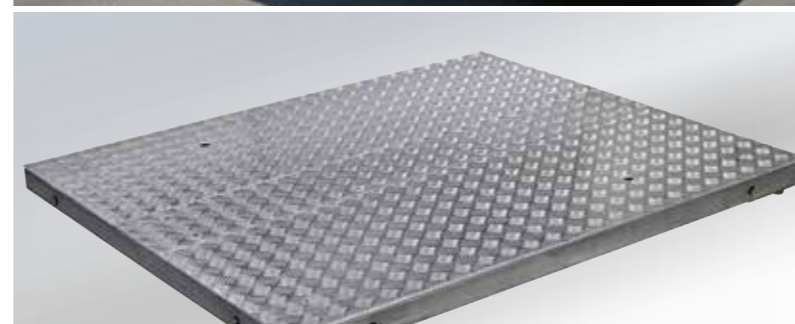

The integrated weighing systems handle both automatic weighing and RFID identification of waste containers, digital run lists, as well as electronic registration and online reporting to the office in real-time.

Automatic weighing systems and industrial scales

Scanvaegt Systems' weighing programme includes automatic weighing systems such as belt weighers, hopper scales and dosage systems, as well as a wide range of industrial scales that span large, robust floor scales and pallet scales to small, precise laboratory scales

Scanvaegt Systems supplies solutions for weighing, registration, identification, data capture and control.

IT SYSTEMS, CONTROL AND OVERVIEW

IT systems

ScanX.Net is a modular, scalable IT system for the handling and administration of weighbridges. The system has a number of standard modules, such as waste registration, accounting, payment, traffic control, identification, invoice calculation and much more. ScanX.Net can also control several production and processing plants in different geographical locations, and split data from the different plants in the same database.

Communication

Scanvaegt Systems has a wide range of powerful data terminals and industrial computers for communicating and handling data connected to weighbridges, data registration during dosage, data capture from other scales, access control and automatic identification.

Video surveillance

Scanvaegt Systems offers several solutions for effective video surveillance, such as network-based cameras with high resolution to read number plates and the load content in vehicles or 360 degree dome cameras to capture everything in the vision field.

Traffic control

Scanvaegt Systems supplies several systems for traffic control during traffic to and from the weighbridge, such as LED-based traffic lights with clear red/green signals for fast and safe traffic control. The system also includes a reliable barrier system, which can be controlled from a weighing terminal or the administration.

PEACE OF MIND WITH A SERVICE AGREEMENT

Life in industry is hectic from morning to night, and the surrounding technology is essential for operations. Operational stops can impact turnover, not to mention customers.

That's why Scanvaegt Systems provides extensive service and support facilities for our customers, regardless of their location.

Our service organisation consists of skilled technicians and specialists who can service your machines, either onsite or via remote online assistance.

Our service agreements consist of one or more modules, depending on the customer's production conditions and needs. The modules also cover hardware and software as well as calibration.

INNOVATION

Scanvaegt Systems is an innovative company that continuously develops new solutions and systems to strengthen our customers' efficiency and competitiveness.

PERFECTION

Solutions from Scanvaegt Systems are designed to work perfectly day after day, year after year. One of the best service teams on the market handles all maintenance.

DEDICATION

Solutions and systems from Scanvaegt Systems can be tailored to the individual customer's needs and wishes.
