

ScanPlant NG Quality Control Effective Quality Management

**FAST OVERVIEW
TIMELY CORRECTIONS
EASY INSPECTION**

The ScanPlant NG Quality module handles quality registrations - including internal inspection and own check - of all kinds of quality and process data as well as deviations, corrective actions and root cause.

Total overview and due care

The ScanPlant NG Quality module handles quality registrations including internal inspection, handling of deviations, corrective actions and root cause.

The quality data are registered on touchscreens, handheld computers or tablets, reducing the need for paper, thus ensuring a faster and more effective internal control.

Depending on the customer's wishes and needs, quality registrations are compiled in summaries and reports that through ScanPlant NG Office provide a quick overview of the documentation together with the internal inspection.

The Quality Control module can be integrated with ScanPlant NG Inventory Management and ScanPlant NG Process Management, which enables a procedure for preventing starting-up production, before the quality control has been carried out.

All kinds of quality and process data can be registered and adapted, such as:

- Temperature measurement (the item, room etc.)
- Cleaning measurement
- Parameter of the process equipment
- Weight of the item / product
- Result of visual control (form, size, colour etc.)
- Result of spot test control
