# ScanX.Air

## Presenting next generation registration software:

ScanX.Air is a modern, web-based software solution designed to digitize and automate the registration of weight, quantities, visits, products, agreements, and customer data.

Via subscription customers use ScanX.Air hosted on Microsoft Azure by Scanvaegt. Customers don't need infrastructure for frontend, backend and no server software.

## Key Features

- **API & Integration** – Connects with third-party systems and hardware via standard web API (HTTPS, JSON, REST).
- The new **'Processes and Steps'** feature will provide a powerful registration flow to meet the evolving demands of a growing business.
- The new **"Jobs"** features execution of custom demands, event trigger based.
- **Mobile Registration** – Register weights and deliveries from smartphone or tablet.
- **Real-time Dashboard** – Monitor key metrics and process status live.
- **Image Capture** – Visual documentation tied to each weight registration.
- **Declaration** – Custom fields on formulars. Approval/Rejection of deliveries.
- **Automated Reports** – Over 25 pre-built reports and custom report generation available.
- Scalable Azure infrastructure provided by Scanvaegt, minimal IT-infrastructure costs on site.
- Remote configuration and OTA updates reduce downtime and maintenance.
- Backward compatible with equipment delivered by Scanvaegt System\*

\*For terminals: VT200 or newer, the CPU unit or SSD disk can be replaced using the correct OS image.

For other hardware components—such as indicators and barriers—control is managed via the VT200 terminal or blackbox. This means that replacing the terminal components as described above is the only required step.

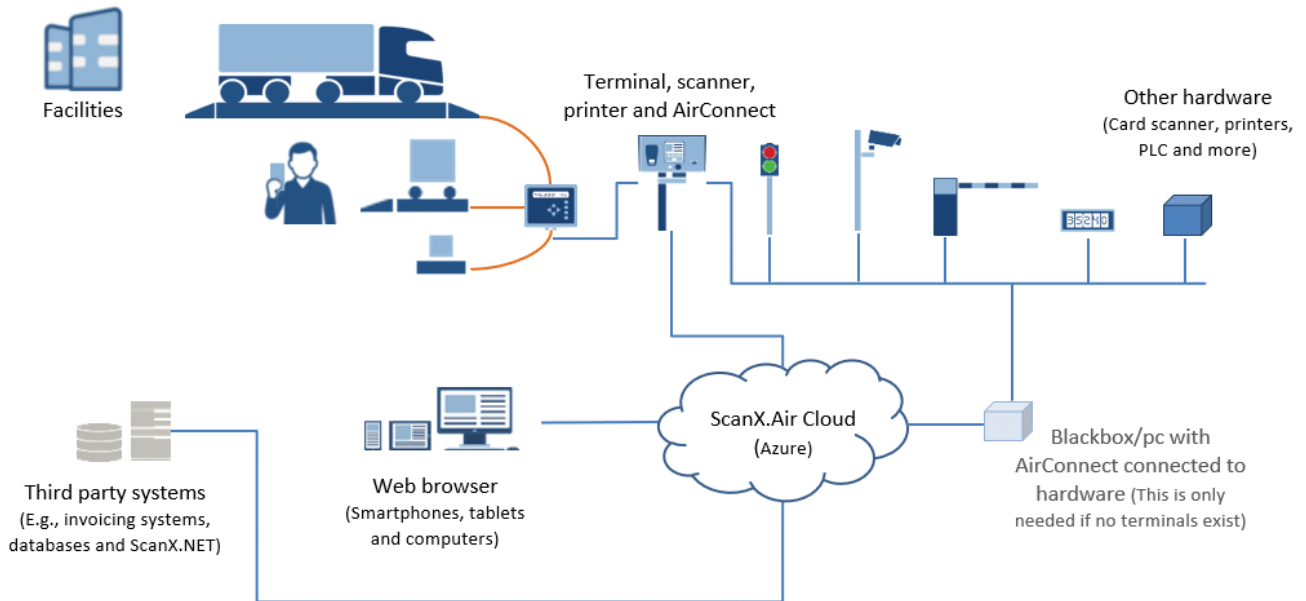

## Your business – Our mission

ScanX.Air is built for waste treatment facilities, recycling centers, logistics companies, and industries handling material registrations. It supports both operators and administrators who need real-time tracking, smooth workflows, and compliance with regulations.

## ScanX.Air setup and services

## Powered by:

### Pricing Model

- Subscription-based model (SaaS): includes SW-maintenance and updates.
- Flexible per-site or per-user licensing

### Support & Onboarding

- Service Center as today
- OTA support by Service Support Team
- Customer success and onboarding team available.
- Training, documentation, and workshop-based setup

### Dedicated system

Developed in collaboration with Scandinavian industry leaders in waste and energy. Trusted by companies with high data security demands.
