

ID-Cards

Barcode-, RFID- and magnetic-cards for easy registration

Highlights

- high quality, durable material
- fast and easy registration
- less manual errors
- colour or black/white layout
- print of own logo/text

Barcode-, RFID- and/or magnetic ID-cards

Scanvaegt's ID-cards are used in the data terminals for identification, registration of weighings and access control. The terminals can be used in connection with truck scales, other scale types or even without a scale connected.

Compared to manual keying-in the required information the ID-cards make registration faster and more simple and reduce at the same time the risk of manual errors.

Several possibilities

Scanvaegt offer a variety of reading systems for the ID-cards, e.g. barcode, RFID or magnetic readers.

Barcode cards

- with barcode for reading in barcode reader.

RFID-cards

- touchless cards, which just need to held close to the card-reader, integrated in the terminal.

Magnetic cards

- med magnetic strip, read by magnetic card readers.

All types of ID-cards can have your individual layout with logo and/or text, and be printed in colour or black/white.

ID-card with barcode.
